

## PUBLISHING ON WEB – ICT WORKSHOP

We were in advance informed by our teacher about the topics that were going to be discussed in the workshop. Ms Chandni Aggarwal initially introduced herself and I was amazed to hear that she had a 10 year experience in the field of teaching and imparting ICT as a subject. Initially we were asked the most important questions of our lives that was “Why do we want to become a teacher?” I remember the Orientation Day when our seniors asked us the same question and most of the people replied that they think it was the safest and secure career for women. But strangely now everyone had a reason but we couldn’t put it into words. Before starting with the topic we were asked by ma’am as to on which social media or social connectivity sites are we active. The most common reply to this was obviously “Facebook”, “Instagram” and “Snapchat” where as we were told that “Twitter” is one of the fastest media which most of us don’t tend to use. We were told how “Facebook” could actually connect us to Educational Groups.

Then we were told about basic skills that we require:

- Communication
- Thinking
- Leadership
- Goals & it's Priority
- Information & Resource Management
- Identifying what is most important for you
- Learning Skills
- Say Yes or No
- Self Management Skills

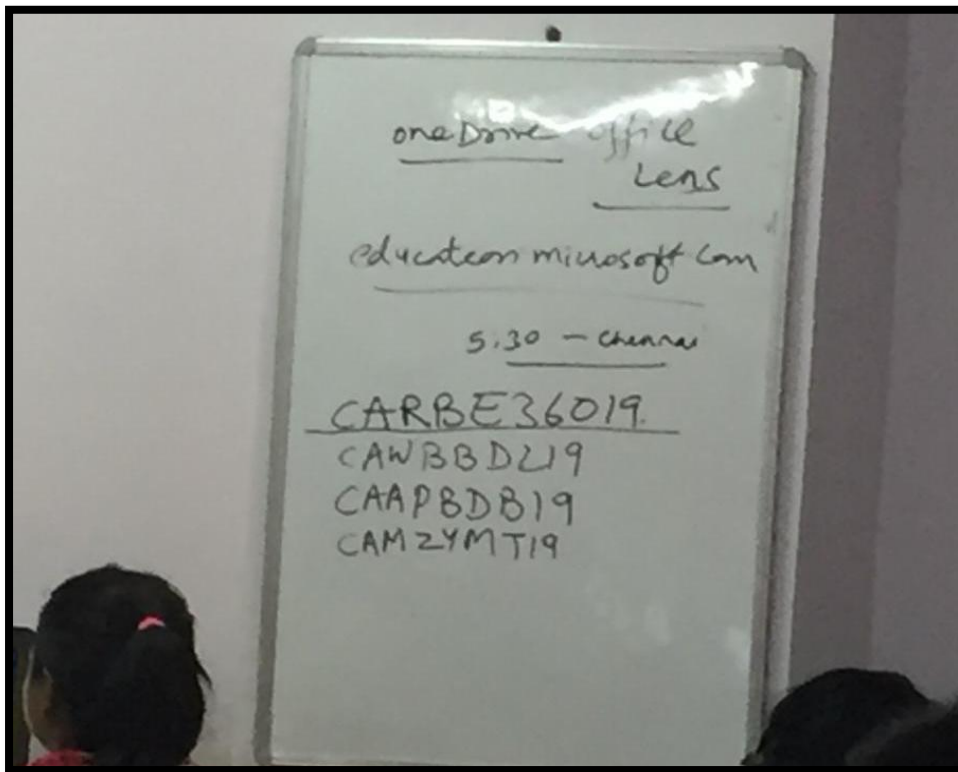

Later we were told as to how could we as teachers for our own teaching communities and share lesson plans , marks of students, through teacher groups that we can form on <https://education.microsoft.com/Start/Welcome> Ms.Chandni asked us to form our accounts on hotmail so that we could practically practice the group formation on the PC in the practical session that was to be held the next day.

Coming to the most interesting part of the Workshop was the “Personality Test”. We were asked to view pictures that were to be shown to us on the projector and see the picture that we observe at first among the 4 in 1 or 3 in 1 pictures. Each option had points and in the end we were to add up our marks and see the test results as to what our personality is like . It was obviously just a test which did not hold true but everyone got so engrossed in calculating their test results. All in all it was a very productive and interesting workshop.

Coming to the next day that was the practical session in which we had to make an account and Chandni ma'am gave us some codes which we had to redeem in order to gain certificates

and badges. In this site were various options that could actually help teachers to share information and moreover gain information in Teacher Educator Groups.

Chandni ma'am was linked to us through whatsapp and she also after the workshop and sent us other codes which we could redeem and earn achievements.
